Origin Codes

Our origins ratings system allows gardeners and ecological professionals to make responsible decisions and allows us all to work together to expand the palette of plants used in our region.

1. Local native, known provenance, diverse genetics

Responsibly wild collected. Seed originating from an established wild population or from a nursery or garden population originating in the eastern piedmont or western sandhills of central North Carolina.

2. Local native, unknown provenance, diverse genetics

Seed propagated at the nursery but procured from a source with provenance unknown or outside of our immediate locality. If a species of known provenance is collected outside of our immediate ecoregion location by county can be provided upon request.

3. Southeastern native

Plants or seeds collected or procured of a species that has not been documented in our immediate area but is native, broadly, to our region.

4. Cultivar/nativar

A selection of a regional native bred for particular characteristics.

5. Exotic, noninvasive

Useful plants that perform ecosystem or sustainability functions and have a solid track record of being non-invasive in our region.
