Lamiaceae-Nepetoideae-Mentheae: *Satureja spicigera* (Creeping Savory)

Creeping Savory, or *Satureja spicigera* is a frost hardy perennial that is similar to its shrubby cousin, Winter Savory, but will creep and form a small dense groundcover, reaching 8cm high and a spread of about 30cm. Creeping Savory is an attractive rambling plant that enjoys well-drained soil and a sheltered position, and frequent picking will help keep the plant from becoming leggy, treat as a rock plant and give sun and sharp drainage. ...is similar in flavour to its cousin Winter Savory. Like other savory's it is an excellent salt substitute. The fresh leaves have a strong spicy flavour and make an excellent accompaniment with bean stews and with meats, working especially well as a flavouring for chicken or turkey. The strong flavour of the leaves become much milder under prolonged cooking so to keep the flavour add the herb near the end of cooking. <http://www.hooksgreenherbs.com/satureja-spicigera-savory-creeping-buy-herb-plant-online/>

Asteraceae-Astroideae-Anthemideae: *Artemisia dracunculus sativa* (French tarragon)

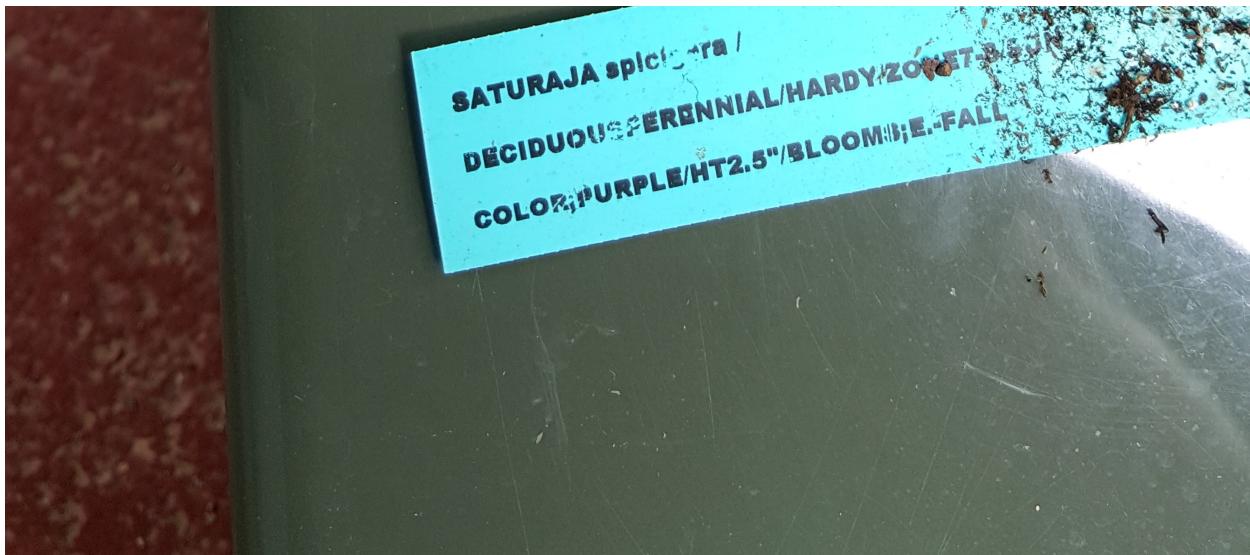

Satureja hortensis (Summer savory) is an annual (self seeds)

Sanguisorba minor (salad burnet)

Labeled *Sanguisorba menziesii*, an Alaskan burnet which is more decorative than edible
"Color maroon red, blooms May June"

PHLOX PURPLE BEAUTY

Low growing phlox with purple bloom
In early to mid Spring. Grows to 4"

For partial sun. Zone 3-8
